## JPEG2RTP

### Hardware RTP Stack for JPEG

Implements a Real Time Transport Protocol (RTP) hardware stack that encapsulates JPEG streams to RTP packets compliant with RFC 2435.

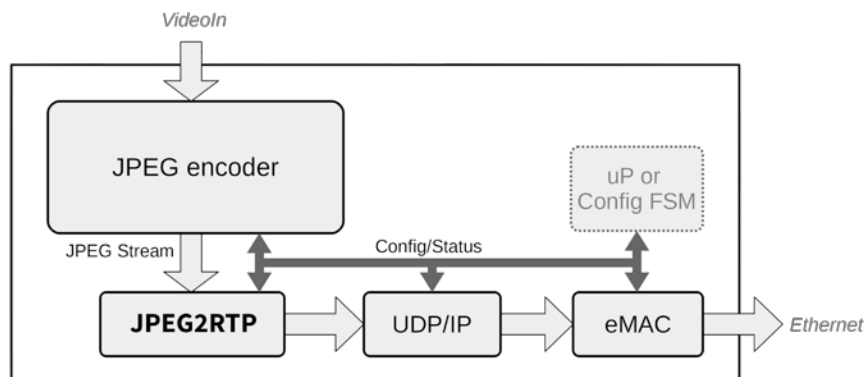

The JPEG2RTP can be directly connected to the output of a JPEG encoder to output RTP packets, which can subsequently be forwarded for UDP/IP or TCP/IP encapsulation. The hardware stack produces complete RTP packets, without the need for any host-processor assistance. Along with CAST's UDP/IP hardware stack, the JPEG2RTP core is ideal for offloading the demanding task of RTP/UDP/IP encapsulation from a host processor, and enables JPEG video streaming even in processor-less SoC designs.

The core is easy to integrate in systems with or without a host processor. JPEG stream and RTP packet data are input/output via dedicated streaming-capable AMBA<sup>®</sup> AXI4<sup>®</sup>-Stream or Altera<sup>®</sup> Avalon<sup>®</sup>-ST interfaces, enabling direct connection to hardware video encoders and hardware stacks for UDP or TCP. Status and control registers are accessible by AXI4-Lite or Avalon-MM interface.

The JPEG2RTP core is available in RTL source or as a targeted FPGA netlist. Platforms integrating the core along with JPEG encoder, UDP/IP, and eMAC cores, are available from CAST, and can enable rapid development of video over IP systems.

### Applications

The JPEG2RTP core is suitable for a wide variety systems and devices featuring JPEG video streaming over IP networks. A sample block diagram of such systems is provided below.

### Support

The JPEG2RTP as delivered is warranted against defects for ninety days from purchase. Thirty days of phone and email technical support are included, starting with the first interaction. Additional maintenance and support options are available.

### Features

#### RTP Encapsulation For JPEG Streams

- Compliant to RFC 2435
- Enables control of RTP packet size
  - Run-time programmable maximum stream bytes per RTP packet
- In-band Quantization Table support

#### Easier Integration For Faster Development

- Processor-less, standalone operation
- AMBA AXI Interfaces
  - AXI4-Lite Control/Status register interfaces
  - AXI4-Streaming interfaces for packet data
- Altera Avalon Interfaces
  - Avalon-MM Control/Status register interfaces
  - Avalon-ST interfaces for packet data
- Available pre-integrated with:
  - JPEG Encoder cores from CAST
  - UDP/IP Hardware Stack from CAST
  - Altera, Xilinx, or other third-party Ethernet MAC core
