SHA-384/512
SHA-384 and SHA-512 Secure Hash Crypto Engine

The SHA-384/512 is a high-throughput, and compact hardware implementation of the SHA-384 and the SHA-512 cryptographic hash functions provisioned by the FIPS180-4 standard. The core is designed for ease of use and integration and adheres to industry-best coding and verification practices. Technology mapping, and timing closure are trouble-free, as the core contains no multi-cycle or false paths, and uses only rising-edge-triggered D-type flip-flops, no tri-states, and a single-clock/reset domain. The SHA-384/512 core features a simple input and output data interface. Support for AMBA bus interfaces and integration with an external DMA are available as options. The highly reliable SHA-384/512 has been production-proven in several ASIC and FPGAs designs.

Block Diagram

Applications

The SHA-384/512 can be used in various applications for ensuring data integrity, and authenticity. Some examples are on-chip communication, electronic fund transfers, digital signatures, password storage, blockchain technology and data backup.

Implementation Results

The SHA-384/512 can be mapped to any ASIC technology or FPGA device. The following are sample ASIC pre-layout results reported from synthesis with a silicon vendor design kit under typical conditions, with all core I/Os assumed to be routed on-chip.

The provided figures do not represent the higher speed or smaller area for the core. Please contact CAST to get characterization data for your target configuration and technology.

Support

The core as delivered is warranted against defects for ninety days from purchase. Thirty days of phone and email technical support are included, starting with the first interaction. Additional maintenance and support options are available.

Deliverables

The core is available in RTL (VHDL or Verilog) source code format, or as a targeted netlist for AMD/Xilinx, Intel FPGA, Lattice, Microsemi, or other FPGA devices. Complete deliverables include test benches, C model, and test vector generator. Multiple times production-proven in ASIC and FPGA designs.

Export Permits

This core implements encryption functions and as such it is subject to export control regulations. Export to your country may or may not require a special export license. Please contact CAST to determine what applies in your specific case.
